

PRECLINICAL SOLUTIONS

2017 Summer Internship Program

The Summer Internship Program at TransPharm Preclinical Solutions is open to local high school and college students interested in a STEM career (science, technology, engineering, and mathematics). Each intern will spend two weeks working on their own project in an environment devoted exclusively to infectious disease research. Projects will focus on ESKAPE pathogens, a group of six bacteria which cause the majority of US hospital infections and are increasingly resistant to current antimicrobials. This year's students will follow-up on the work of previous interns, concentrating on soft tissue models and/or pulmonary models and generating PD₅₀ values for various comparator drugs.

Interns will receive a stipend for participation. Due to laboratory safety regulations, all applicants must be 18 years old by their internship start date. For further information or to apply, please contact Dr. Santiago Lopez (santiago@transpharmsite.com).
